Vulnerability Analysis & Mapping Specialist | Information Management Officer | Data Analytics Specialist

PROFESSIONAL SUMMARY

Experienced Vulnerability Analysis and Mapping (VAM) professional with over 9 years supporting humanitarian and development initiatives across Africa, including direct contributions to WFP's regional VAM activities. Proven ability to conduct multi-country food security and nutrition assessments, needs analyses, and geographic targeting to inform programme design and emergency response. Strong track record of producing actionable evidence to support resilience and social protection programmes through data integration, stakeholder coordination, and rigorous analytical reporting. Deep understanding of WFP's operational frameworks, with experience aligning regional geospatial solutions and dashboard reporting with VAM's strategic priorities.

Core Technical Skills

- Integrating geospatial data into Monitoring & Evaluation systems, including the use of dashboards, spatial indicators, and mapping tools for project performance tracking.
- Managing spatial data infrastructures (SDI), conducting geoprocessing and spatial analysis, and producing both static and interactive maps to support project design, COSOP planning, and implementation.
- Designing and managing digital data collection systems (Kobo Toolbox, ODK, Survey123) aligned with MICS/DHS standards for accurate, structured data capture in complex environments.
- Utilizing Power BI, Tableau, R, Python, and SQL for advanced data modeling, visualization, and the creation of geospatial dashboards supporting operational decisions.
- Developing and maintaining interoperable IM platforms and databases to streamline geospatial data consolidation across project stages, ensuring consistency and quality for audits and reporting.
- Delivering training programs and technical guidance on GIS and M&E systems to field and regional staff, with a focus on capacity building and institutionalization of geospatial tools.
- Delivered specialized QGIS training and hands-on lab sessions for WFP regional staff, significantly strengthening in-house GIS capacity for food security analysis.

PROFESSIONAL EXPERIENCES

WFP – Redr Deployment | VAM/GIS Officer (Mapping & Analysis)

Johannesburg, South Africa **Sept 2024 – Oct 2025**

- Provided technical GIS leadership in support of WFP's regional Vulnerability Analysis and Mapping (VAM) priorities, including food security monitoring, geographic targeting, and situation analysis.
- Designed and implemented modular geospatial workflows and automated spatial reporting using ArcGIS Enterprise and Google Earth Engine to support evidence-based planning and programme design.
- Developed and maintained real-time dashboards integrating Earth Observation and AI-driven indicators (e.g., rainfall, shocks, vegetation) to enhance early warning and operational coordination.
- Contributed to proposal development and reporting processes by providing geospatial inputs aligned with donor expectations and VAM programmatic frameworks.

UNHCR, the UN Refugee Agency | Associate Information Management Officer (AAP)

Nairobi, Kenya **May 2023 – Aug 2024**

- Developed qualitative data feedback systems using digital tools (Kobo Toolbox, Power BI) for enhanced community engagement in program design.
- Developed SOPs and data governance protocols for GIS and IM platforms, contributing to standardized workflows across multiple country offices.
- Aligned IM platforms with result management systems style indicators, enhancing cross-project visibility and compliance tracking.
- Delivered IM briefings and training sessions to operational teams across five countries, increasing data-driven decision-making capacity.

UNHCR – MSB Deployment| Information Management Officer (CCCM)

Kabul, Afghanistan **Oct 2022 – Apr 2023**

- Designed a comprehensive geospatial Information Management Strategy for CCCM Cluster, standardizing data protocols and workflows.
- Applied spatial analysis to assess risk, displacement patterns, and service coverage, guiding project design and operational planning.

- Introduced tools to improve real-time IDP monitoring, integrating GPS data, online maps, and analytics dashboards.
- Led virtual and in-person training on digital data collection and GIS tools for field-based staff.

IMPACT Initiatives (REACH) | GIS & Data Officer

Addis Ababa, Ethiopia **Jan 2022 – Sept 2022**

- Developed MICS/DHS-aligned household survey systems, including digital data collection workflows and spatial sampling frameworks.
- Streamlined data processing using R, enhancing validation, visualization, and reporting of geospatial datasets.
- Led integration of spatial datasets into centralized geospatial platforms to improve project transparency, audit readiness, and cross-division data flow.
- Managed and coached a GIS/Data team, improving team output quality and professional development.

SafeLane Global | IMSMA Data Officer

Juba, South Sudan **Jun 2021 – Dec 2021**

- Collected and analyzed geospatial risk and clearance data at the village level, feeding into rural recovery planning and development partner coordination.
- Conducted spatial data audits and designed QA protocols, achieving 98% accuracy across hazard datasets and map outputs.
- Supported community-level development interventions by providing geospatial tools for targeting underserved rural populations.
- Delivered GPS/GIS training to local stakeholders, building long-term rural capacity for spatial planning, monitoring, and risk management.

Norwegian People's Aid | Information Management Officer

Mutare, Zimbabwe **Aug 2019 – May 2021**

- Applied geospatial analytics to support rural development programs, including agricultural risk mapping, service coverage analysis, and infrastructure planning.
- Managed real-time operational dashboards and GIS tools to support survey logistics and national reporting efforts.
- Led geospatial training for over 50 staff, increasing institutional capacity in Survey123, ArcGIS, and mobile data workflows.
- Implemented data governance protocols, ensuring 100% compliance with organizational standards.
- Drafted institutional guidelines for GPS-based monitoring and spatial data integration aligned with global humanitarian standards.

The Development Initiative (TDI) | Geospatial Mapping Officer

Abyei, Sudan **Oct 2015 – Jun 2019**

- Maintained and audited spatial data systems to support field clearance and risk mapping in conflict-affected regions.
- Enabled rural infrastructure development (e.g., roads, irrigation, schools) by clearing hazardous areas, directly contributing to community resilience and rural mobility.
- Collected and analyzed geospatial risk and clearance data at the village level, feeding into rural recovery planning and development partner coordination.
- Delivered field trainings in GPS/GIS tools, building long-term partner capacity.

EDUCATION AND TRAINING

- Master of Social Science Degree in Development Studies, Zimbabwe Open University 08/2019 – 12/2023
- Master of Science Degree in Big Data Analytics, Chinhoyi University of Technology 08/2020 - 08/2022
- Bachelor of Arts Honours Degree in Geography, University of Zimbabwe 09/2011 - 10/2014

LANGUAGES

- English: Fluent (C2)
- French (A1, currently enrolled at Alliance Française Nairobi)
